FOR IMMEDIATE RELEASE

New Release of ISCS's SurePower Innovation Provides Prefills and Shortcuts that Save Time *Document management functionality helps insurers migrate away from siloed systems.*

San Jose, CA – February 18, 2015 – [ISCS](#) is pleased to announce Version 3.0.10 of SurePower Innovation®, [a modern enterprise suite designed to handle all aspects of property and casualty \(P&C\) core administration](#), provides document and data prefill functionality across the suite to enable faster quoting, claim resolution and product speed-to-market.

"It's exciting to see these kind of capabilities in a modern enterprise suite," said Karen Furtado, partner for SMA, [an advisory and consulting firm exclusively serving the insurance industry](#). "Insurers have typically looked to best-of-breed solutions for these types of features. This new functionality in modern enterprise suites, like SurePower Innovation, gives insurers more options for building their technology architecture. This is a significant advance from ISCS."

Insurers are no longer forced to rely on best-of-breed for document and content management needs. Version 3.0.10 features the ability for insurers to store documents and other artifacts unrelated to policy or claim files in new document cabinet folders within SurePower Innovation. Other new document management functionality includes drag-and-drop, improved custom filtering, full document audit trail capability, user-defined templates and security access lists for each document cabinet folder.

Additional functionality made available via this new release includes:

- *LexisNexis® Auto Data Prefill*: This new data report interface requests a LexisNexis Automobile Data Prefill report directly from SurePower Innovation by providing required information, and returning results that automatically prefill quotes with drivers and vehicles found at the searched address.
- *Improved Commission Plans*: Insurers can now place producers on new commission plans pre-populated by data imported from Excel spreadsheets. Plans contain new levels of detail and flexibility over traditional definition by license class, including commission area, business source and code.
- *Claimant Preferred Payment Method*: This new feature eliminates keystrokes and saves time by auto filling the claimant's preferred payment method and pulling ACH information from [SurePower Policy](#) without user intervention.

"ISCS is constantly improving and evolving the system to meet our customers' needs, incorporate industry standards and overcome market challenges," said Andy Scurto, president of ISCS. "Over and above just modernizing and automating processes critical to effective core administration, P&C insurers need a clear path that will enable a migration away from siloed, best-of-breed solutions. This new functionality goes beyond industry standard features of core systems to help insurers achieve a future-first position in terms of technology maturity and utilization."

###

About ISCS

ISCS is the developer of SurePower Innovation®, a highly scalable, configurable, cloud-based modern enterprise suite that mitigates risk and increases business agility for property and casualty (P&C) insurance organizations writing personal, commercial and specialty lines. SurePower Innovation extends beyond core administration (policy, billing and claims) to include reinsurance, business intelligence (BI), insurance accounting, payables, document management, producer/commission management, agent/consumer portals and more. With a 100% proven implementation track record on enterprise core system replacement projects, ISCS consistently delivers SurePower Innovation as a complete, managed SaaS solution via ISCS's SurePackage™ deployment option, allowing insurers to focus on the business of insurance. **For more information, visit the company website at www.iscs.com.**
